How to compile and execute your program

This

The hardness of this assignment and how you overcome it

我覺得看懂題目最難):

我覺得最難的是如何從檔案讀進來後有邏輯的將資訊存放在變數裡

這是我的存法:

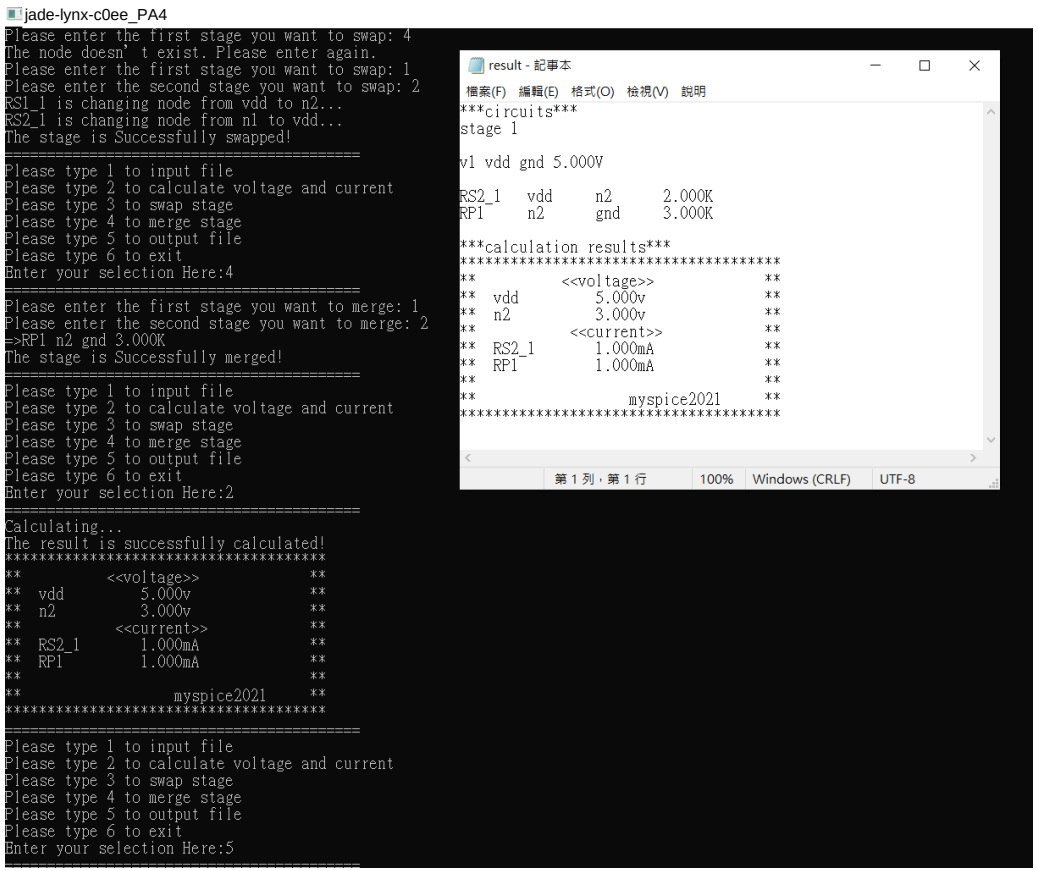

```
vector <stage_information> stage(16);
```

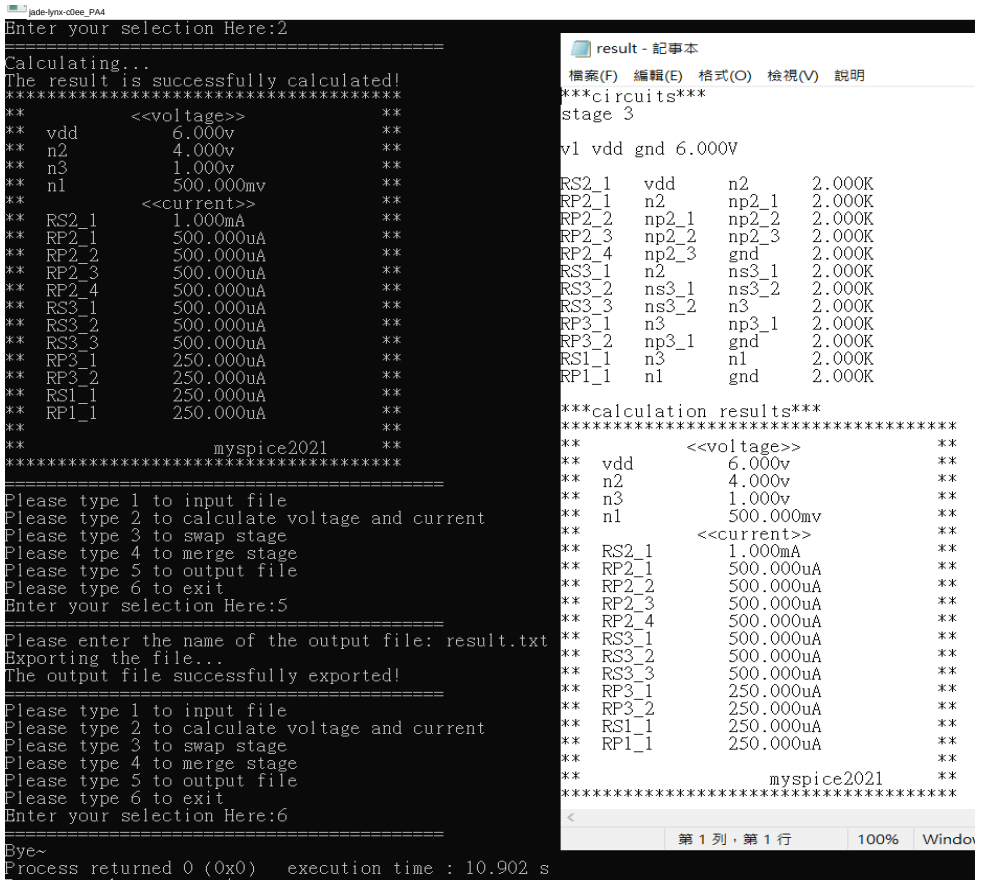

stage[i].rs[j].resister_name;
這代表第i個stage第j個series resister的資訊
stage[i].rp[j].resister_name;
則是第i個stage第j個parallel resister的資訊

```
struct resistor      //儲存電阻的information
{
    string resistor_name;
    string resistor_beginning;
    string resistor_end;
    float resistor_value;
    float resistor_current;
};
struct stage_information      //儲存stage的information
{
    vector <resistor> rs;
    vector <resistor> rp;

};
```

The completion of the assignment: all

jade-lynx-c0ee_PA4

```
Please type 1 to input file
Please type 2 to calculate voltage and current
Please type 3 to swap stage
Please type 4 to merge stage
Please type 5 to output file
Please type 6 to exit
Enter your selection Here:2
========================================
Calculating...
The result is successfully calculated!

第 1 列，第 1 行 100% Windows (CRLF) UTF-8

Any suggestions about this programming assignment?

這次的PA跟以前的根本不是同一個等級，花了我好多時間，感覺其它科要炸了，希望下次難度能下降一點(好像沒下次了:))
