How to upload your file

- Upload your PA2_STUDENT zip

2. Select this zip

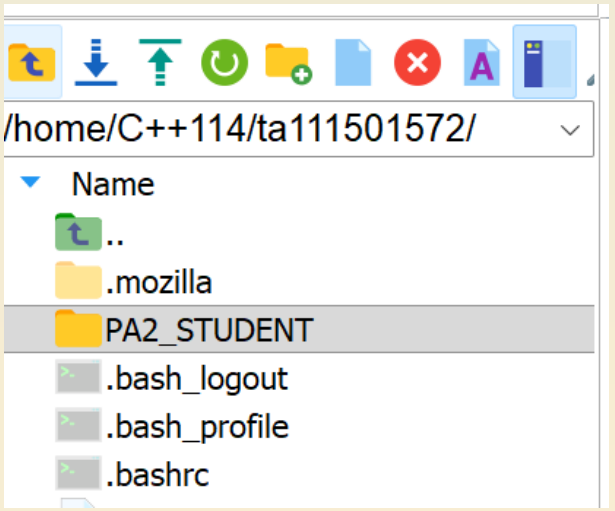

How to upload your file

- Unzip your PA2 _STUDENT folder

```
[ta111501572@linuxcad30 ~]$ unzip PA2_STUDENT.zip
```

- You should see this folder

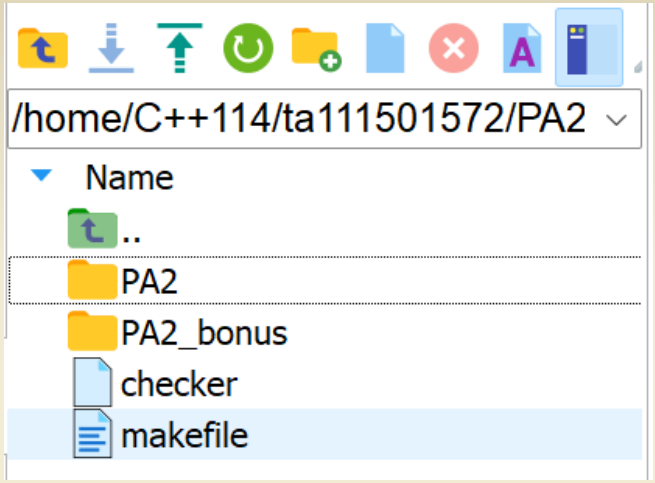

Hint: You can rename the folder if you are familiar with the commands.

- Go into the folder

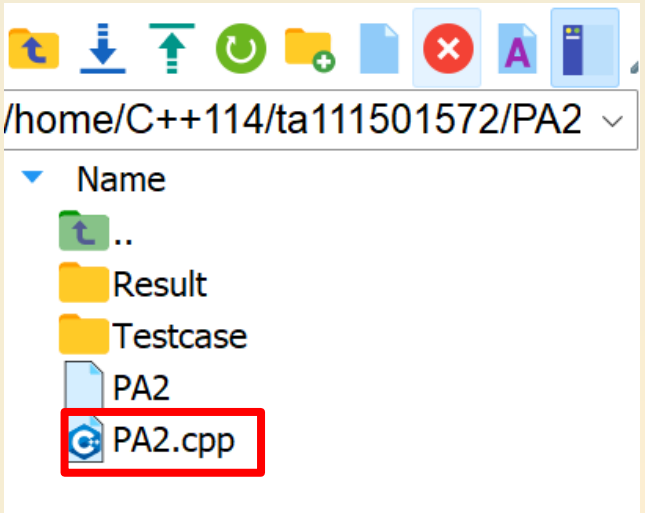

```
[ta111501572@linuxcad30 ~]$ cd PA2_STUDENT
```

How to upload your file

- You should see this inside the folder

- Then, click the PA2 folder and upload your code
  (Name : PA2.cpp)
  (Name : PA2_bonus.cpp)

PA2_bonus is uploaded in the same way in the other folder

How to compile your program

- Make sure you are in the correct folder

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$
```

- Then, compile your code by entering

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make all
```

- To compile your bonus program, enter

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make all_bonus
```

How to execute your program

- Execute the program with **ALL** provided test cases by running

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make run_pa2
```

- The output will show whether each test PASS, FAILED, or TIMEOUT(> 2min) with its limit.

```
=== Running ALL test cases ===
=== Running PA2_PublicCase1_20s (target: 20 s) ===
Result: PASS (time=0 s, limit=20 s)
=== Running PA2_PublicCase2_20s (target: 20 s) ===
Result: PASS (time=0 s, limit=20 s)
=== Running PA2_PublicCase3_40s (target: 40 s) ===
Result: PASS (time=1 s, limit=40 s)
=== Running PA2_PublicCase4_20s (target: 20 s) ===
Result: PASS (time=0 s, limit=20 s)
```

How to execute your program

- Execute the **bonus** program with **ALL** the provided test cases by running

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make run_pa2_bonus
```

- If the execution time exceeds the limit, the result will show as FAILED.

```
=== Running PA2_bonus_PublicCase3_4s (target: 4 s, BONUS) ===
Result: FAILED (time=5 s, limit=4 s)
```

- If your program runs longer than 2 minutes, it will be automatically terminated (TIMEOUT).

```
=== Running PA2_bonus_PublicCase3_4s (target: 4 s, BONUS) ===
Result: TIMEOUT (> 2 min)
```

How to execute a specific test case

- You can also run only **one specific test** case by adding the CASE=X option in the end (X=1~4)

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make run_pa2_bonus CASE=1
=== Running PA2_bonus_PublicCase1_20s (target: 20 s, BONUS) ===
Result: PASS (time=0 s, limit=20 s)
```

- DON'T change any file names or the Makefile.

  If you modify your code, use the following command to clean old files and recompile

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make clean
```

How to check your program

- Use the checker to check the correctness of your **ALL** program's output log file.

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make check_pa2
```

PA2_bonus is check in same way ，check specific test by adding the **CASE=X** in the end

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ make check_pa2_bonus
```

- If "Permission denied", run the following command. Then re-execute the checker.

```
[ta111501572@linuxcad30 ~/PA2_STUDENT]$ chmod 700 checker
```

Checker message

- Correct Message

```
=== Checking PA2_PublicCase1_20s ===
[PASS] Result, Replay, and Grid are all valid!
[RIGHT] Score matches for this PublicCase
```

- Valid but not match the best score

```
=== Checking PA2_PublicCase1_20s ===
[PASS] Result, Replay, and Grid are all valid!
[WRONG] Score does not match for this PublicCase
```

- Invalid path or wrong statistics

```
=== Checking PA2_PublicCase1_20s ===
[FAILED] Steps mismatch: replay=2 vs reported=4
```

Notice

- The checker works correctly for path verification, and the best solutions are verified as well. Error messages are clearly shown, so you can fix your program by yourself.
- However, not every result is guaranteed to be perfect — please **double-check your output manually before submission**.

Q&A

- If you have any question about checker, please send me email
