Final Project: Design Synthesis Review

silver-kite-2a91

1. How to compile and execute your program; (You can use screenshot to explain)

void_2_variables(int,ofstream&),_3_variables(int,ofstream&),_4_variables(int,ofstream&); :the function to write the variables into kmap_out.txt

void buildcircuit(int*, char*argv[]); :the function to build circuit

void mapport(int*,ofstream&); :the function to print the port

2. The completion of the assignment; (If you complete all requirements, just specify all)

I complete the whole assignment, but are some flaws in it.

在電路輸出有錯但是我沒時間改了

3. The hardness of this assignment and how you overcome it;

I'm struggling painfully through the entire course. Whenever an assignment is announced, I have no thoughts in my mind, and I'm the one finishing the homework at the very last moment, which makes me very frustrated. I definitely would not want to take the course a second time.

4. Any suggestions about this programming assignment?

Hope the instruction about MobaXterm could be more specific. The instruction "$program.out input.txt result.txt" was nonsense to me at first sight, I realized its meaning after asking others.
